

Arjun Nagla

Automation & Data Systems | RPA, Power Platform, Python, SQL

9848152360 | arjunnagla3@gmail.com | linkedin.com/arjun-nagla-743a3b148

SUMMARY

Automation and data professional with 6 years of experience designing RPA bots, AI-assisted workflows, and Power Platform solutions across finance operations and localization — from the **Spark Assist** AI translation suite to an AI agent that replaced a ~20-person manual process. Currently lead a 3-person RPA development team at Genpact.

SKILLS

Automation: Power Automate (Cloud & Desktop), AI Builder, Copilot Studio agents, VBA/Macros

Data & Development: Python, SQL, Power BI, Power Apps, Dataverse, PyQt5

Platforms & Tools: SAP, SharePoint, Microsoft Access, Excel (Power Query)

EXPERIENCE

Assistant Manager, RPA — Genpact

Oct 2025 – Present

- Lead a team of **3 developers**, assigning new automations by required skillset and owning Technical Design Document review and sign-off before build starts.
- Designed the **Correction Notice Automation**, combining a Power Automate Desktop bot, an AI Builder extraction model, and a trained Copilot agent to replace a ~20-person manual process — **~6 FTEs saved**, net of a human-review safeguard.
- Built an AI-driven **collections follow-up and escalation system** (Power Automate + AI Builder reply classification, SharePoint-tracked state); negotiated and delivered an agreed **2.7 FTE** savings target, down from an initial 3.5 FTE ask.
- Proposed and delivered a **Power Apps + Dataverse** replacement for a legacy Access database — migrated 13 tables and **30 users in 60 days**, adding a new admin interface and role-based access.
- Built a reusable Power Automate Desktop pattern for portal and remittance-file retrieval, deployed across 10+ portals and 20+ automations — **~2.5 FTEs saved** combined.
- Delivered Power Automate (Cloud & Desktop) training to a **30-person** internal Automation CoE team and a client's automation team; maintain VBA across a ~2,000-database legacy Access environment.

Senior Specialist — IFF

Jan 2025 – Oct 2025

- Delivered a portfolio of SAP automation macros (VBA) saving an estimated **2,500+ hours a year**; one core journal-clearing macro cut from 4+ hours to under 10 minutes.
- Built a standalone **PyQt5 desktop application** for real-time status tracking, replacing manual polling and shortening response time to blocked items.
- Maintained and enhanced VBA code across a legacy environment of roughly 2,000 Access databases.

Lead Data Analyst — S&P Global

Jul 2020 – Dec 2024

- Designed and built the **Spark Assist AI translation suite** — a set of AI agents for translation, automated accuracy comparison, and layout-preserving HTML/PDF translation — cutting Vietnamese outsourcing costs **40%** on documents over 200 pages.
- Built a Python-based translation memory optimization pipeline processing **1.5 billion+ entries**, raising hit rates from ~3% to 55–60% and cutting outsourcing costs 30–40% on affected languages.
- Built an end-to-end Power Automate Desktop bot automating Japanese/Korean workflow processing — **2.5 FTEs (3,313 hours) saved annually**.
- Transitioned from an Operations role into building automation and AI tooling for the team's own workflows.

EDUCATION

PGDM, Business Analytics — St. Joseph's PGDM College	2023
B.Sc (MSCs) — St. Joseph's Degree & P.G. College	2020

CERTIFICATIONS

- Six Sigma Yellow Belt — Six Sigma study
- Certified Lean Facilitator — S&P Global
- Self-management & Communication Skills — Dhanwantari Institute of Science and Technology

AWARDS

- Innovation Champion — Q1'23, Q2'23, 1H'23, 2H'23
- Zero Defect Award (Silver) — zero errors, Sept–Nov 2021
- Annual Rock Star Rookie Award
